

PRESS RELEASE

Coming Soon: The Most Powerful Treasury in Web3 Is About to Go Live

Backed by Bitcoin. Controlled by You.

In a world of empty promises and synthetic tokens, **MindWaveDAO** is doing what others won't — bringing *real capital* on-chain with Bitcoin yield strategies, real governance, and real institutional scale.

A new era is about to begin.

A Bitcoin Treasury Engine

Decentralized, transparent, and fully aligned with DAO participants. We're deploying an advanced BTC yield framework designed to activate idle Bitcoin — turning it into a powerful treasury that supports innovation across DeFi, AI, ClimateTech, InsurTech, and beyond.

\$NILA: The Token That Controls the Flow

\$NILA isn't just a governance token. It's the control valve for one of the most ambitious Bitcoin capital deployments ever initiated in Web3. Token holders will have voting rights over yield deployment, treasury strategy, and DAO-powered investment mandates.

Institutions Are Already Lining Up

From asset managers to public companies, the next wave of players want access — but early token holders will always be at the center of the MindWave economy. The door opens once. First in gets the power seat.

This Is MindWaveDAO

Not a trend. Not a fork. Not a speculative sprint.

This is the launch of a Bitcoin-native treasury layer for the DAO economy — and it starts this week.

Front-Row Access Opens Soon

✉ Lock your allocation early: otc@mindwavedao.com
